Summary Report

CSMA Carrier Sense Multiple Access ensures fewer collisions as the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is required to first sense the number of the station is stationary to the station is required to stationary the station is stationary to the stationary that it is not sense that the stationary that the stationary that is not sense that the stationary that the stationar

However there is still chance of collision in CSMA due to propagation delay....
